- I. Claims 1-12 and 35-41, drawn to a joint connection between a rod and a plate, classified in class 403, subclass 263.
- II. Claims 13-29 and 42-50, drawn to a pyrotechnic shearing device, classified in class 83, subclass 639.4.
- III. Claims 30-34, drawn to an explosive actuated valve, classified in class 137, subclass 68.13.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the invention of Group I has separate utility such as connecting tools to a tool holder or a table leg to a table, the invention of Group II has separate utility such as a cable cutter, invention of Group III has separate utility such as controlling fluid flow. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the search required for Group I is not required for Group II, the search for Group I is nor required for Group III and the search for

Art Unit: 3753
